

12.17 SDK Task Condition: Current User: User Name

This SDK function allows you to perform a check on the user who triggered the process, i.e. the user who performed the save.

Specifically, it allows you to check if this user corresponds to a statically specified user within the function (Figure 1)

For more information on the operating logic of these types of SDKs, see chapter 11.3 of the processes manual.

The screenshot shows a web-based configuration interface for a BPMN task. The title bar reads "BPMN-Task" and "Task_0jm9hsr". There are "Save" and "Cancel" buttons in the top right. The main area is divided into sections:

- Entity:** A dropdown menu set to "Ticket".
- When to run the check:** A list of radio buttons with "on create" selected. Other options include "on create / change", "on change", "every time the condition is true", "only the first time the process starts", "when executed subprocess", and "on relation with:" (which has a "Documents" dropdown).
- Conditions:** A section with a "New Group" button. It contains a single condition: "Current user: User Name" (dropdown) "equals" (dropdown) "admin" (text input). There is a trash icon to the right of the condition and a "New Condition" button below it.
