

14.1 SDK Task Condition:

Current User: User Name

This SDK function allows you to perform a check on the user who triggered the process, i.e. the user who performed the save.

Specifically, it allows you to check if this user corresponds to a statically specified user within the function (Figure 1)

For more information on the operating logic of these types of SDKs, see chapter 11.3 of the processes manual.

The screenshot shows a web-based configuration interface for a BPMN task. The title bar at the top reads 'BPMN-Task' and 'Task_0jm9hsr'. There are 'Save' and 'Cancel' buttons in the top right. The main area is divided into sections. The 'Entity' dropdown is set to 'Ticket'. Under 'When to run the check', several radio button options are listed: 'on create' (selected), 'on create / change', 'on change', 'every time the condition is true', 'only the first time the process starts', 'when executed subprocess', and 'on relation with:'. The 'on relation with:' option has a dropdown menu showing 'Documents'. Below this is the 'Conditions' section, which contains a row of three input fields: 'Current user: User Name', 'equals', and 'admin'. To the right of these fields is a trash icon. At the bottom left of the conditions section is a 'New Condition' button, and at the bottom right is a 'New Group' button.
