

3.10 Reset Conditional Fields

This action refers to the use of process-side conditional fields.

In fact, it is possible to set conditional fields on the selected entity (involved in the process) or based on the Dynamic Forms present in the process.

In the case of conditional fields on the entity, these prevail over administrator-set conditional fields. The latter are disabled until the end of the process or an action task "Reset conditional fields". (Figure 1)

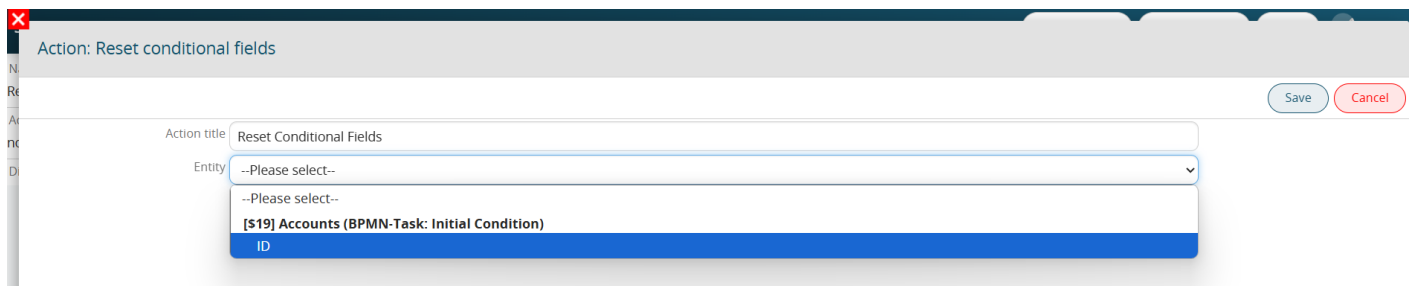

The image shows a software interface for configuring an action. At the top, a header bar reads "Action: Reset conditional fields". Below this, there are two input fields: "Action title" and "Entity". The "Action title" field contains the text "Reset Conditional Fields". The "Entity" field is a dropdown menu currently showing "--Please select--". A dropdown list is open below the "Entity" field, showing two options: "--Please select--" and "[S19] Accounts (BPMN-Task: Initial Condition)". The second option is highlighted in blue. To the right of the form fields, there are two buttons: "Save" (blue) and "Cancel" (red).
