

3.14 Copy the Products Block

This action allows you to copy the product block between entities involved in the process. (Figure 1)

N.B: both entities must have a product block.

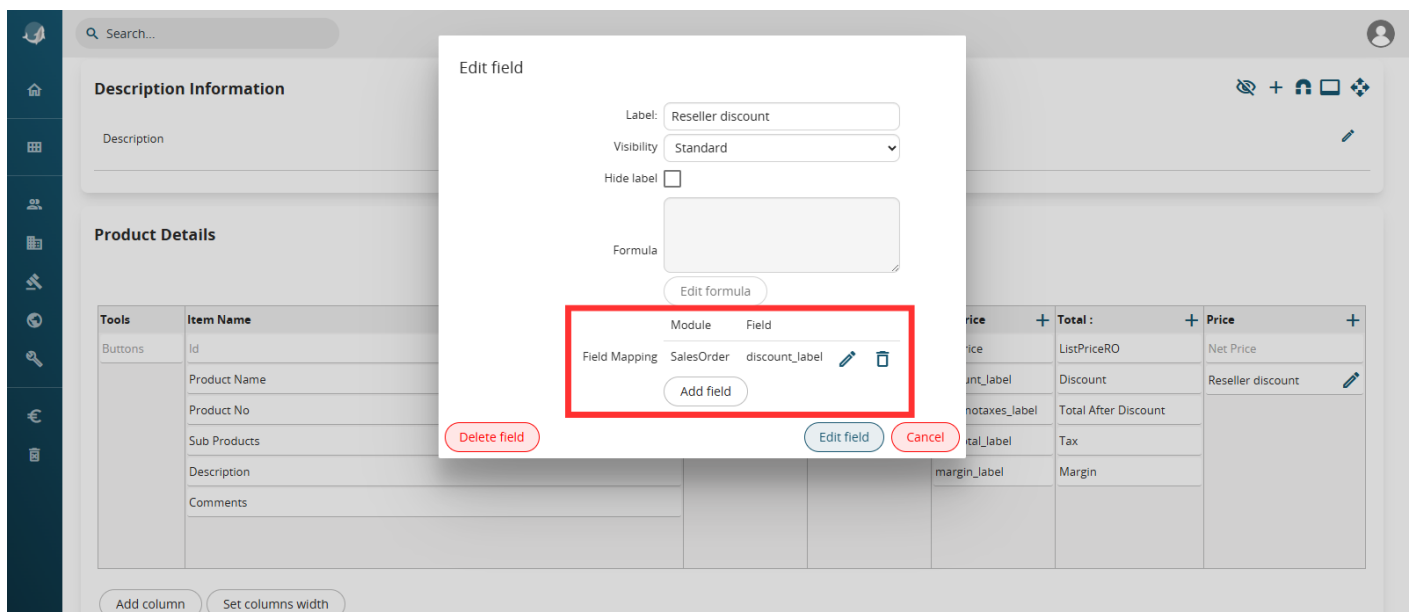

The screenshot shows a configuration window titled "Action: Copy products block". It contains the following fields:

- Action title:** Copy the Products Block
- Source entity:** ID
- Destination entity:** ID

Below these fields is a blue informational box that states: "Mapped fields from layout editor will also be copied." At the top right of the window are "Save" and "Cancel" buttons.

Figure 1

All the fields present in standard will be copied automatically, instead custom fields will only be copied if there is a specific mapping within the "Field Mapping" section that can be configured directly from the products block of the Layout Editor of the module involved. (Figure 2)

The screenshot shows the "Edit field" dialog box overlaid on a layout editor. The dialog box contains the following fields:

- Label:** Reseller discount
- Visibility:** Standard
- Hide label:** ☐
- Formula:** (empty text area)

Below the formula field is an "Edit formula" button. At the bottom of the dialog is a "Field Mapping" table with two columns: "Module" and "Field".

Module	Field
SalesOrder	discount_label

Below the table is an "Add field" button. At the bottom of the dialog are "Delete field", "Edit field", and "Cancel" buttons. The "Field Mapping" table and its associated buttons are highlighted with a red rectangle.
