

4.3 STATUS

It represents the status of the process, the value “In progress” is automatically proposed (Figure 1).

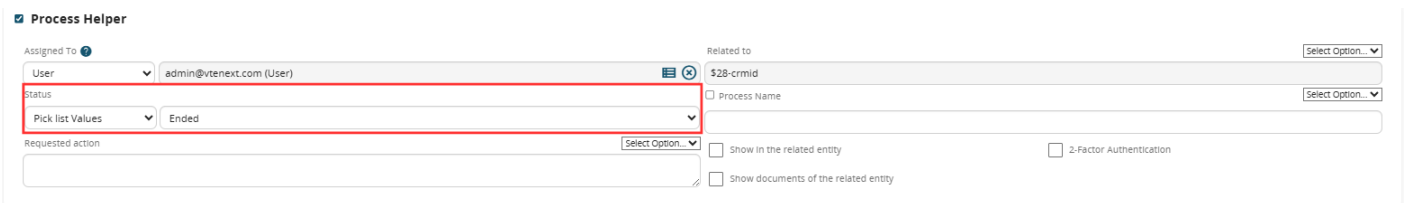

The screenshot shows the 'Process Helper' configuration interface. The 'Assigned To' field is set to 'admin@vtenext.com (User)'. The 'Status' dropdown menu is open, showing 'Running' as the selected option. Other fields include 'Requested action', 'Related to' (set to '\$2B-crmid'), and checkboxes for 'Show in the related entity', 'Show documents of the related entity', and '2-Factor Authentication'.

Figure 1

NOTE: from the moment a process helper is activated within a process, from that moment on the management of the state becomes “manual”, therefore it will be managed until the end through the use of other process helpers.

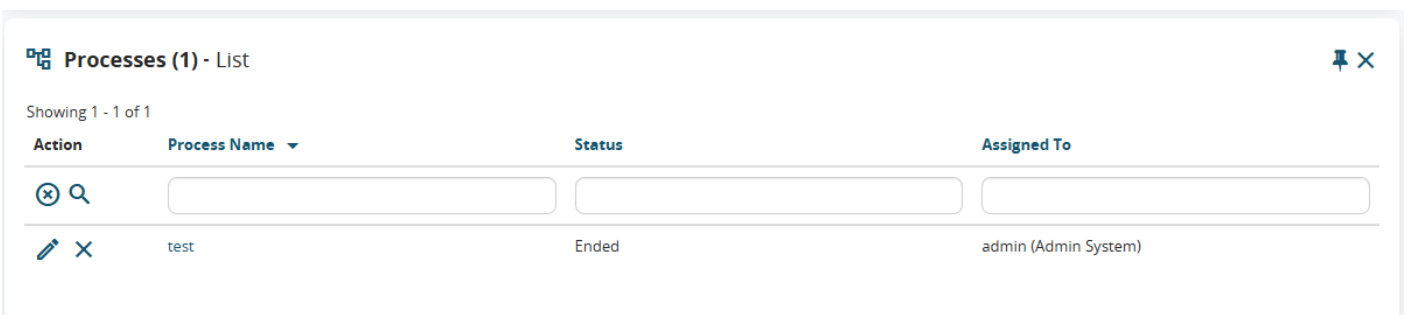

Specifically, within each single configured EndEvent, it will be necessary to activate a process helper to force the state to “Terminated” in order to correctly close the process (Figure 2).

Otherwise, the process will still end its flow but the “Status” will remain “In progress” creating potential inconveniences for the assigned users.

The screenshot shows the 'Process Helper' configuration interface. The 'Assigned To' field is set to 'admin@vtenext.com (User)'. The 'Status' dropdown menu is open, showing 'Ended' as the selected option. Other fields include 'Requested action', 'Related to' (set to '\$2B-crmid'), and checkboxes for 'Show in the related entity', 'Show documents of the related entity', and '2-Factor Authentication'.

Figure 2

Action	Process Name	Status	Assigned To
	<input type="text"/>	<input type="text"/>	<input type="text"/>
	test	Ended	admin (Admin System)
