

4.4 Process name

It represents the Name of the process (which by default will always be the one defined in the “Name” field of the process).

By inserting a value in this field it will be possible to temporarily modify the name of the process in order to insert a title more appropriate to what is requested from the user in this specific step of the flow, in order to give a further indication to the assignee of the process helper (Figure 1).

The screenshot shows a 'Process Helper' form with the following fields and options:

- Assigned To:** User dropdown menu, currently showing 'admin@vtenext.com (User)'.
- Status:** Pick list Values dropdown menu, currently showing 'Running'.
- Requested action:** Select Option... dropdown menu.
- Related to:** \$28-crmid dropdown menu, currently showing 'Process Name'.
- Options:**
 - ☐ Show in the related entity
 - ☐ Show documents of the related entity
 - ☐ 2-Factor Authentication

The 'Process Name' field in the 'Related to' dropdown is highlighted with a red box.
