Introduction

Plugin for bidirectional synchronization between the vtenext Calendar and one or more calendars in your Google Calendar account, with the ability to create Google Meet meetings and automatically send participation invitations.

Do you use Google Calendar and want to keep it synchronized with your vtenext CRM? With the **Google Calendar Sync Plus** module, you can securely connect your Google account and synchronize one or more Google calendars with the vtenext Calendar in a flexible and reliable way, while also creating Google Meet links directly from the CRM.

The synchronization is incremental (using Google Sync Tokens), ensuring fast and efficient updates. It also synchronizes event visibility settings and can map Google Calendar colors to vtenext activity types. With an active license, plugin updates can be installed independently via OTA (Over-the-Air) directly from the administration panel.
