vtenext Business 18.12 Release Note

NEW INTEGRATION CAPABILITIES

vtenext is increasingly becoming a platform capable of bidirectional communication and seamless integration with other systems within an organization. This feature plays a key role in extending CRM logic and processes to all areas and levels of the organization, enabling widespread access to information.

Key updates include:

New standard REST APIs to simplify interactions with external systems, featuring token-free implementation and significant logging improvements. Combined with additional developments (meta-done solution), these features make vtenext a comprehensive solution capable of integrating with all systems used within an organization.

Other enhancements include:

- **Versioning** for modules, roles, profiles, and conditional fields.
- A **new "notes" widget** with a more intuitive design and functionality.
- **Drag-and-drop file upload** for single or multiple files, with automatic compression.
- **Quick Look Relations**, offering a preview popup for all related fields (UItype10).
- **CDN functionalities** for distributing images and other static content via CDN or hosting them on a separate server.
- **Customer Portal** enhancements, with simplified development, SDK function utilization, and the ability to read conditional fields created via the interface.
- **Dynamic forms**, enabling the import of blocks and module fields into dynamic forms.
- **GDPR support**, now extended to business units.

vtenext 18.12 delivers improved overall performance, fully supporting PHP 7.2.
