*Audit Trails view, located in settings*

3. Centralized email Signature with possibility to differentiate it according to the Business Unit.

**Messages signature**

Font Size **B I U S A**

-- \$Users||first\_name\$ \$Users||last\_name\$

Users --None-- [INSERT](#)

- None--
- User Name
- Login via LDAP
- Admin
- email
- Status
- First Name
- Last Name
- Default Lead View
- Role
- Menu View
- Default Module
- Language
- Theme
- Dark Mode
- Allow generic talks
- Enable public talks
- Notify me via
- Timezone
- Notification Summary

4. New “Bookme” feature in email signature. The user can define the available time slots in its calendar, adding a book me event type, the external users will so be able to book an appointment. The Book me box in the email module allows the user to enable/disable the feature.

#### 8. Book me Configuration

Enable Book me

yes

Event selection mode

Semiautomatic

Minimum time between events

1 hour

Event duration

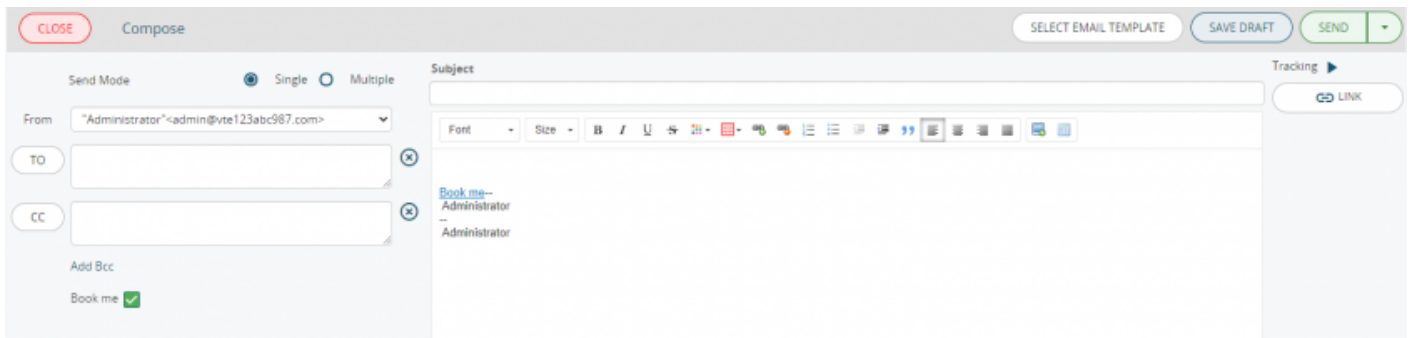

30 minutes

Default in email composing

no

## *User settings view*

The image shows a web-based email composer interface. At the top, there's a header bar with a 'CLOSE' button on the left, the word 'Compose' in the center, and buttons for 'SELECT EMAIL TEMPLATE', 'SAVE DRAFT', and 'SEND' on the right. Below the header, the interface is divided into several sections. On the left, there's a 'Send Mode' section with 'Single' and 'Multiple' radio buttons. Below that is a 'From' field with a dropdown menu showing 'Administrator' and an email address. There are 'TO' and 'CC' fields with input boxes and 'x' icons to remove recipients. An 'Add Bcc' link is also present. A 'Book me' checkbox is checked. The main area is for the 'Subject' and the email body. The subject field is empty. The body has a rich text editor toolbar with options for font, size, bold, italic, underline, link, unlink, bulleted list, numbered list, indent, outdent, background color, and text color. The body text shows a preview of an email with the subject 'Book me' and the body 'Administrator Administrator'. On the right side, there's a 'Tracking' section with a play icon and a 'LINK' button.

## *Email composer view*

5. Temporary document saving uploaded on the database if the filesystem is not available or in read only mode (good for NAS/web storage style)
6. Office365 OAuth2 for Imap mail
7. AutoDetect of external HTML links for calendar events: largely used by online meeting platform invitations (eg. Zoom, GoToMeeting, etc.). This new feature allows the possibility to report the meeting link directly in the calendar event
8. Activities ran in background: activities that used to take a lot of time, like the telemarketing records' creation, are now ran in background in order to avoid the time out
9. The data import now supports the product variants, introduced in vtenext previous release. In this way the product import, from ERPs or other platforms, is facilitated.
10. Bug fixing.

---

## **Processes**

1. The product variants are now available in the Process Maker
2. It is possible to cycle the records related to another record like as if it was a table field
3. It is possible to start a process when a record, N a N related to another record, is related (e.g. a process can start when a Contact is related to an Account)
4. The Emails sent from the process are now automatically related to the record
5. All the documents linked to a record can be sent via Email automatically by the Process
6. Emails are transferred from a record to another, via process, in a simplified manner
7. The Process Helper allows the display of documents linked to the parent record

**8.** From this release on it is not possible to create Workflows. The module will still be available in read only mode.

---

## **Synchronization**

**1.** In the new release are now available new types of integrations with external platforms.

Already existing integrations:

- Hubspot
- Salesforce
- SuiteCRM
- Jira
- vtiger

**2.** Additional integrated modules:

- Accounts
- Products
- Currency
- Sales orders
- Taxation

**3.** The synchronization also involves the following new ecommerce:

- Magento
  - PrestaShop
  - Shopify
  - WooCommerce
- 

## **Elastic Search**

With the 21.01 release the new feature Elastic Search is introduced to all vtenext modules. It allows to display the search results in a faster manner.
