17.13 List view colours

Allows for the application of custom colours of views by list, or related list, based on the value assumed by a picklist-type field or control box. **Note that only one field can be chosen per form.**

Furthemore is possible to choose the **style through which color records**, which are: Full row, Little block on the left or Thin line in the bottom of the record. Lastly is possible to adjust the color intensity, thanks to a slider that manage the percentage value.

Full row	
Little block on the left	
Thin line	

For example, we want to view Accounts records with colour based on the **Rating field**.

Edit page to change the color of the Accounts based on Rating field

This colour will then be shown on the All filter (no active filter) and on the custom filters created for the module.

List view with coloring
