

5.2.6 Other Settings

- **Layout:** change the emails list layout
- **Filters:** set up filter rules for automatic transfer of emails into folders
- **POP3:** set up a secondary account in POP3 mode

Warning! Once a secondary account has been configured in POP3 mode, a copy of the secondary account emails will be created on the email server of the main account. The main account mailbox may therefore tend to run out of storage space.

Out of Office

From version 19.10 an automatic “Out of Office” notification can be set in order to respond to emails informing the sender of your out of office status. Clicking on  from the Messages module allows you to access this function, by means of the specific item of the same name. An additional window will open in which you can Enable or Disable this function and set the automatic replay message text.
