

# 17.11 Encrypted Field Editor

The encrypted field editor allows you to protect the content of a field by means of an access password. The user can only access the contents of the field after entering the password.

The screenshot shows the 'Settings > Encrypted fields' page. The breadcrumb 'Encrypted Field Editor' is visible. A vertical sidebar on the left contains icons for home, list, user, document, chart, globe, and key. The main content area displays the message 'No encrypted fields. Click Add to create a new one' and a single 'Add' button in the top right corner.

Choose the module and the field of interest and enter the password:

The screenshot shows the 'Settings > Encrypted fields' page with the 'Create' button highlighted. The form includes dropdowns for 'Module' (set to 'Accounts') and 'Field' (set to 'Description'). Below these are input fields for 'Password' and 'Confirm password', both masked with dots. An alert message at the bottom states: 'Alert: If you forget the password, data will be lost and cannot be recovered..'. The 'Create' button is highlighted, and the 'Cancel' button is visible in the top right corner.

**Warning!** If you forget your password, the data can be recovered through technical assistance.
