

6.1.2 Step 2: Target

At this point the campaign recipients target must be defined, associating Targets and Campaigns. In the campaign tab, select the Target module and then Add Target in the Relations menu. If the target has already been created, use Select Target to select it.

N.B.: you can add more than one.

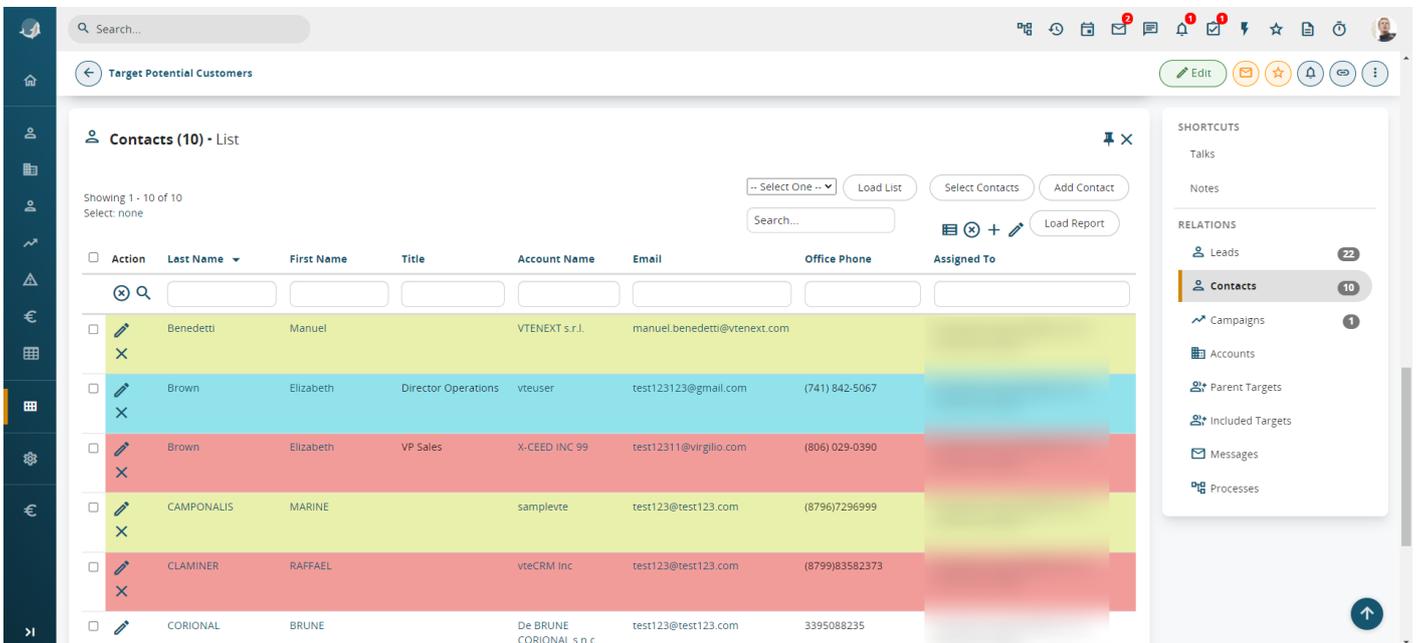

The target is composed of lists of names, a set of accounts, contacts and/or leads (also of other targets). The names are loaded either individually (with single name search) or by means of filters.

Choose the module concerned in the relations menu, select the filter from the drop-down menu and click Load List.

The filter must be already available (e.g.: Filter Customers in Foreign Companies) and then used as a target.

N.B.: With this new function it is no longer necessary to reload a target in order to manage a newsletter. The target will be updated automatically in two ways (user selectable):

- **Incremental:** names are added to the target based on the initial filter. Does not take into account filter variations that result in record exclusions;

- **Synchronised:** varies upward and downward based on the filter.

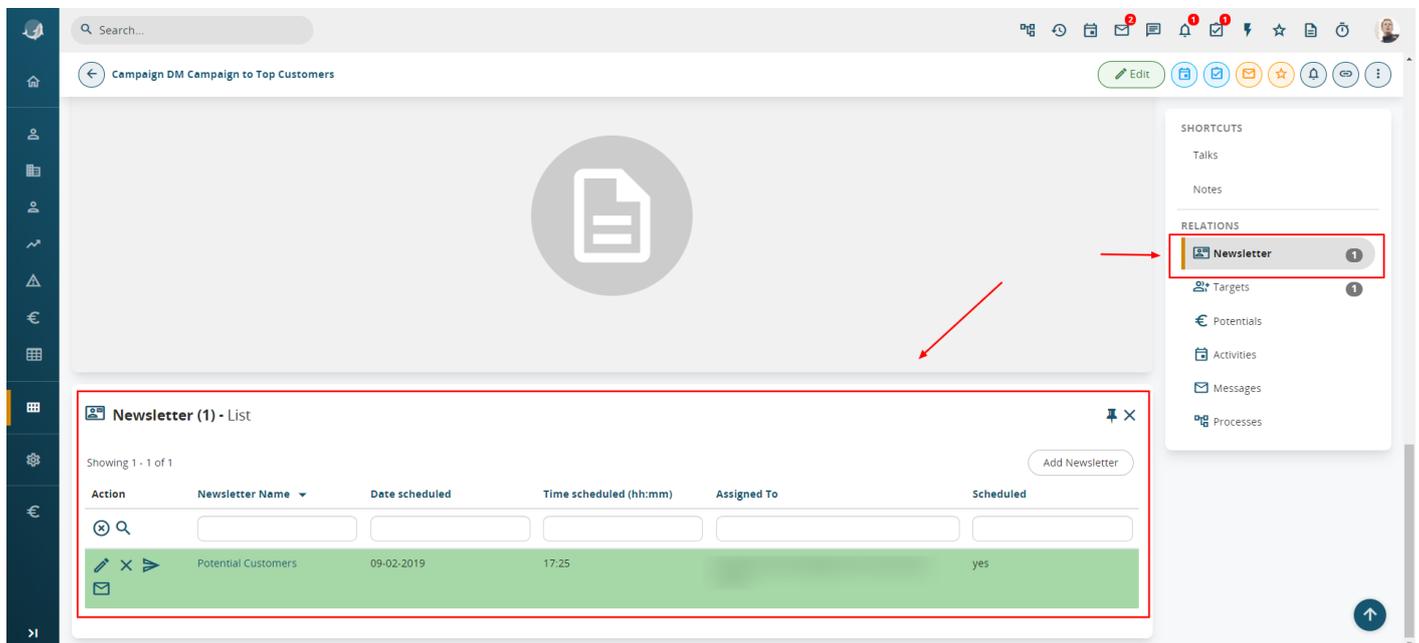

This update will occur automatically every 6 hours thanks to a cron that allows you to reload the records to the target automatically. In addition, automatic synchronisation is performed when the Newsletter is sent, or when the user decides to click on the Send Email button.

If the Target is set to **Target Type = Dynamic and Synchronisation Type = Synchronised**, in the Accounts, Contacts and Leads relationships, the **Add** and **Select** buttons of the relative entities will not be available.

In the example in the above figure, the target includes 498 accounts, 2 contacts and 0 leads. The campaign, which involves sending a newsletter in our case, will be addressed to this set of recipients.

Note. The Newsletter module can manage duplicated email addresses avoiding repeat sends to the same email address. Therefore, if the target includes an account and a contact associated with the same email address, the newsletter will be sent only once, and no manual clean-up operations will be necessary.

The targets can be nested and included, exclusively in order to group specific customers together. For example, you can create an Italy target (parent target) containing a target for each Italian region (included targets). When you send the newsletter, it is sent to all recipients indiscriminately. The function is display only.

The screenshot shows a CRM interface for a campaign titled "Campaign DM Campaign to Top Customers". The main area displays a large document icon, indicating a missing or empty target. A red arrow points from the "Newsletter" item in the "RELATIONS" sidebar to the main area. Below the main area, a table titled "Newsletter (1) - List" is visible, showing one entry for "Potential Customers" scheduled for 09-02-2019 at 17:25. The table has columns for Action, Newsletter Name, Date scheduled, Time scheduled (hh:mm), Assigned To, and Scheduled.

Action	Newsletter Name	Date scheduled	Time scheduled (hh:mm)	Assigned To	Scheduled
  	Potential Customers	09-02-2019	17:25		yes
