

17.11 Encrypted Field Editor

The encrypted field editor allows you to protect the content of a field by means of an access password. The user can only access the contents of the field after entering the password.

Choose the module and the field of interest and enter the password:

A screenshot of the 'Settings > Encrypted fields' page in the Encrypted Field Editor, showing the 'Create' form. The form includes two dropdown menus: 'Module' (set to 'Accounts') and 'Field' (set to 'Description'). Below these is a section 'Choose the password used to decrypt it:' with two password input fields labeled 'Password' and 'Confirm password', both containing six dots. In the top right corner, there are two buttons: 'Create' and 'Cancel'. At the bottom, there is an alert message: 'Alert: If you forget the password, data will be lost and cannot be recovered..'

Warning! If you forget your password, the data CANNOT be recovered.
