

17.6.3 Import new language pack

The module manager allows you to import a new language package. The procedure below sets out the installation steps.

Settings > Module creator

Allows to create custom modules

1

Module information

2

Blocks and fields

3

Default filter

4

Relations

5

Labels

6

Advanced

Cancel

Next >

Insert the basic informations for the new module

Module label

The label of the new module

Singular Module label

The module's label in the singular form, to identify a single record. For example, if the module is called "Expenses", this label shall be "Expense"

Module name (automatic)

The name of the module, used internally. This field is calculated automatically

Main field

The main field for the module, for example "Expense Name"

Area

--None--

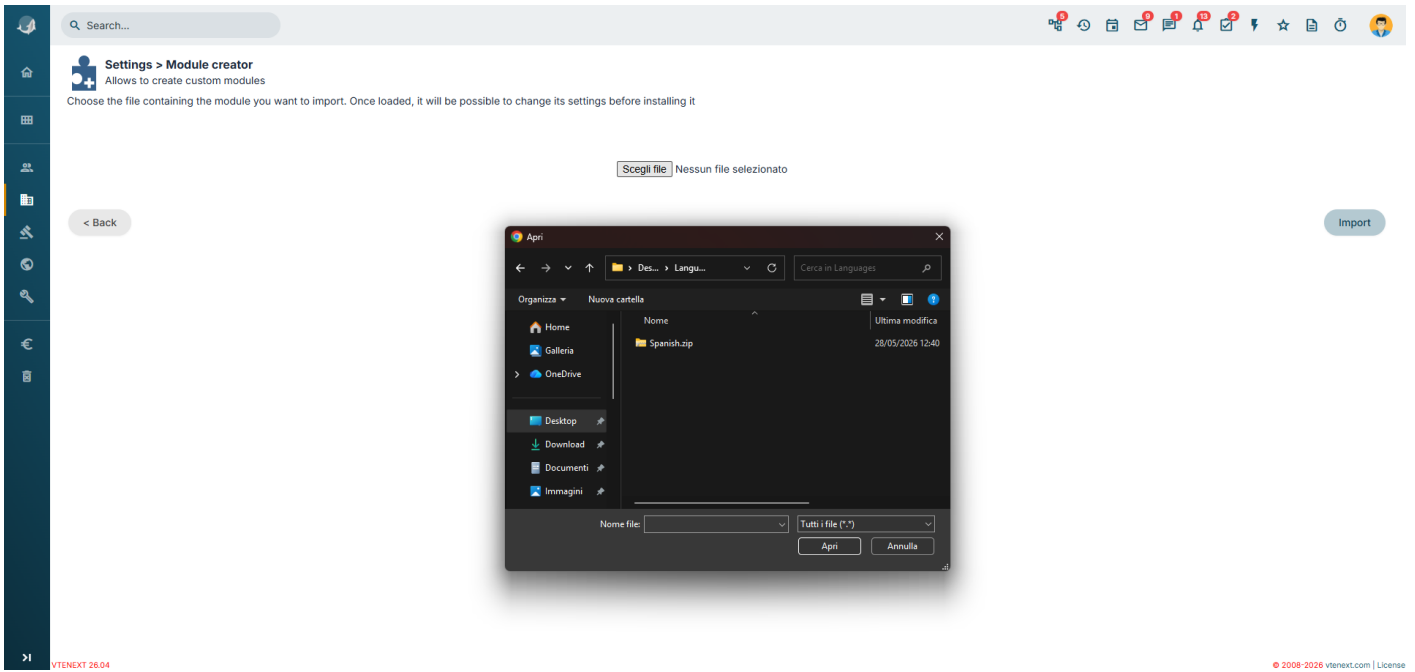

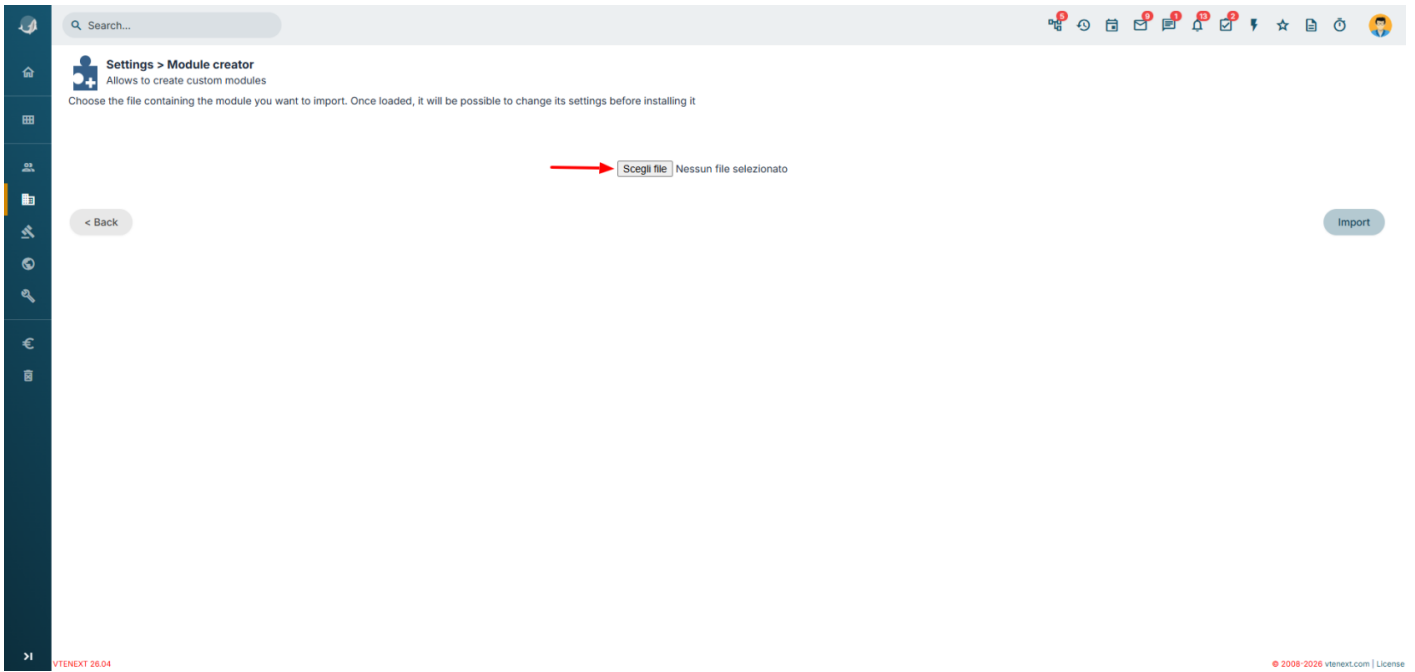

The Area the module belongs to (optional)

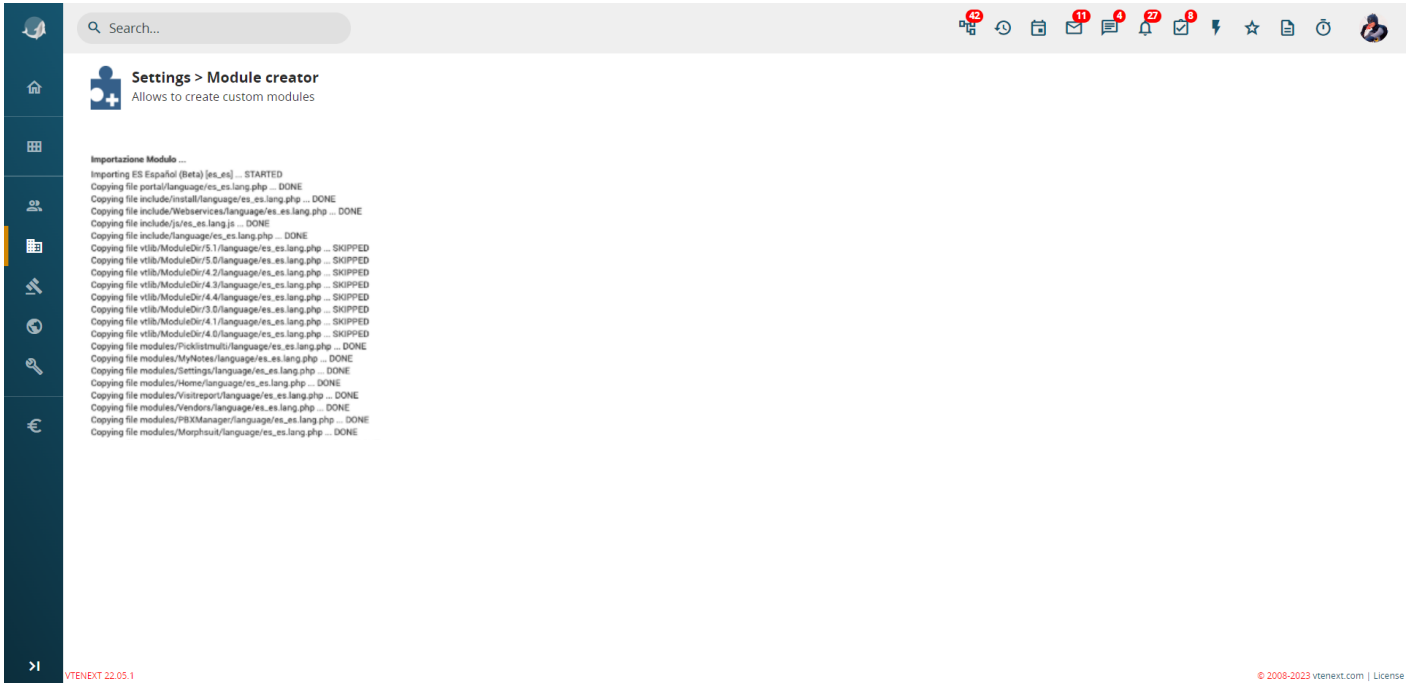

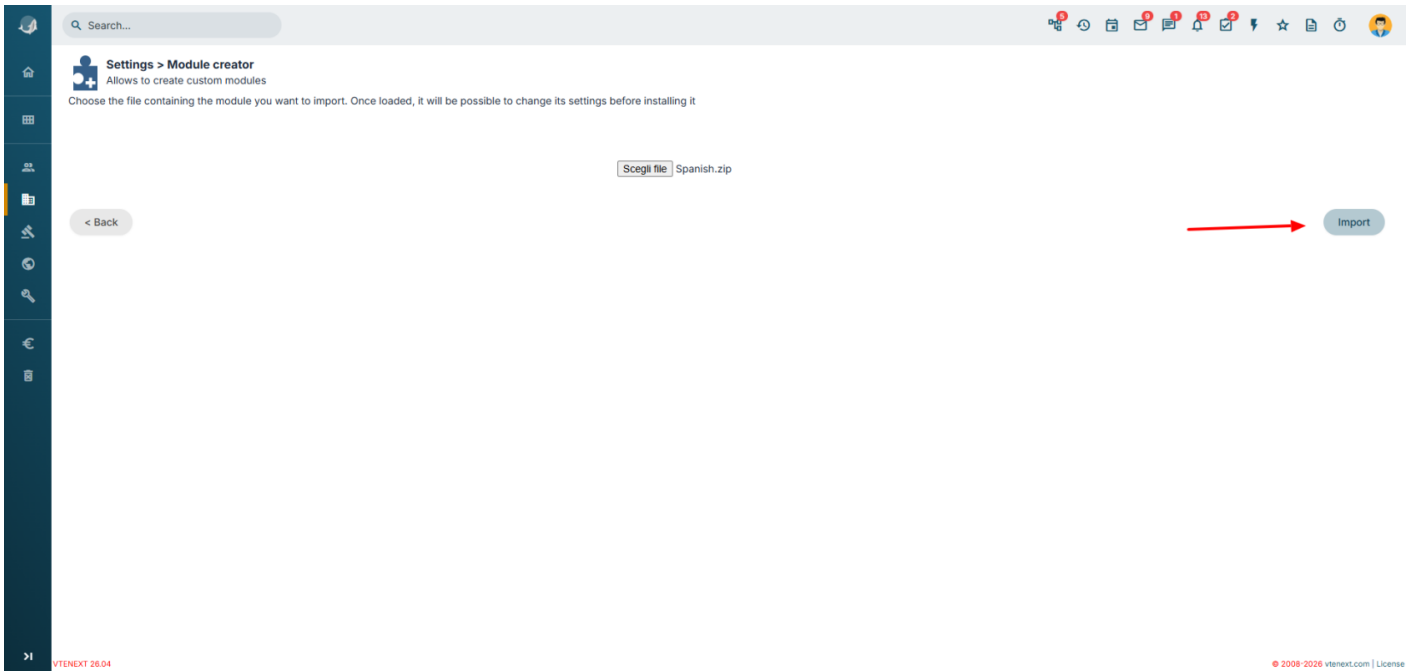

Module with products block

☐

Select the checkbox if the module will have the products block

[illegible]

The new language can be changed in the user preferences.
