

2.5.3 Preview and Shortcut Buttons in List View

In module lists, the **Preview** button has been introduced on the left side of each row. This button opens a half-page panel, allowing you to view a preview of the record and also update it by pressing the **Edit** button. It is possible to restore the previous behavior by changing the properties **layout.listview.preview** and **layout.listview.fast_edit**.

Record preview display directly in list view
