# 8.3 Services

Like the Products module, designed to distinguish the catalogue of physical products in the inventory, the Services module distinguishes services such as training and assistance packages, defined by a duration (hours, days, years).

Key fields of the Services record:

| | |
|---|---|
| **Service Name** | Name of the service |
| **Usage Unit and Number of Units** | State the unit of measurement of the service and the number of units |
| **Active** | Active means available for sale (this means that inactive services cannot be entered in quotes, orders, etc.) |

Taxes are treated with the same configuration as that described for the Products module.
